

CASE STUDY

ROCK SAW - DOONAN PROJECT

OVERVIEW

Ryan from a local civil & earthworks company required a better solution than a masonry chainsaw to cut sandstone blocks at his project in Doonan QLD.

CHALLENGES

Because of the size of the sandstone blocks Ryan was cutting, he noticed that his masonry saw chain and blade was wearing out quickly and needed to be replaced regularly.

The cost to replace the saw and chain after every 4 tanks of fuel was becoming expensive and time consuming.

Ryan needed a solution quickly so that he could get the job back on track and to help within the budget.

SOLUTIONS

earth gear supplied a 5 tonne rock saw at very short notice to help solve Ryan's problem.

earth gear's diamond rock saw had very little wear at the end of the project and saved a lot of time.

RESULTS

earth gear's prompt response and supply of the 5 tonne rock saw allowed Ryan to return to the project at hand, reduced downtime, increased productivity and saved money.

CLIENT FEEDBACK

earth gear have been great, I needed a rock saw to complete this job and they got one organised for me in a short time. Their backup support has been really really good
